

TRAINING trainers for digital transformation

On September 9 and 10, 2025, a Training of Trainers event was held in Athens, Greece, organized by Eurotraining. It brought together experts in agricultural digitalization and partners from the **DigiBuild Project**.

Over the two days, participants explored key topics such as:

- ✔ The European Green Deal and its impact on Latin America.
- ✔ Digital tools in Europe and their application in agriculture.
- ✔ European best practices and how to adapt them to the contexts of Costa Rica and Honduras.
- ✔ Presentations of experiences from other European projects.

The event also featured hands-on workshops and a field visit to the Agricultural University of Athens, where participants observed cutting-edge technologies for sustainable farming.

STRENGTHENING project coordination

On **September 11–12, 2025**, the **third transnational project meeting (TPM3)** of DigiBuild partners took place in Athens, with the **participation of all seven organizations**.

The consortium reviewed progress across all work packages, with a focus on:

- Preparation for pilot implementation in Costa Rica and Honduras.
- Testing and refining the Virtual Learning Platform.
- Aligning dissemination, training, and evaluation efforts.

This meeting reinforced collaboration and set the course for the next project milestones.

BUILDING the foundations of digital training in agriculture

Laying the Foundations for Digital Training in Agriculture
DigiBuild continues to advance the design of its digital training modules, which integrate digital competencies and sustainability in the agri-food sector.

The training process will be structured around five thematic modules:

- Introduction to Digital Agriculture
- Technological Tools to Support the European Green Deal
- Smart Agricultural Technologies for Climate-Resilient Farming and Data-Driven Decision-Making
- Designing Tech-Based Agri-Innovation Business Plans
- Digital Marketing and Communication for Agriculture

Each module will be offered as an open digital course accessible to producers, technicians, and trainers in Costa Rica and Honduras.

Stay tuned for the launch of the courses on the DigiBuild learning platform!

BUILDING NETWORKS for project growth

Two **members** of the DigiBuild team participated in the **Regional Erasmus+ Week 2025**, held in Bogotá, Colombia, in October 2025.

This edition focused on the **Green Transition**, a core priority for both European and Latin American cooperation. The event highlighted successful Erasmus+ projects **promoting environmental and climate action** across Latin America, the Caribbean, and Europe.

DigiBuild's participation helped to:

- ✔ Showcase project progress and impact.
- ✔ Share best practices in digital and sustainable agriculture.
- ✔ Build new partnerships for future collaborations.

We are confident that this experience will foster strategic alliances with other Erasmus+ stakeholders committed to a greener and more digital future.
